[redacted]

DEVELOPER

Kyungsung University · IT Department · Busan, South Korea

Student ID: [redacted]

Contact: Not included because no email address or phone number has been provided.

PROFILE

IT student at Kyungsung University with hands-on academic project experience in Python-based application development, OCR, computer vision, and privacy-focused software. Interested in building practical tools that help people identify and protect sensitive information before sharing digital content.

EDUCATION

Kyungsung University — IT Department

Undergraduate studies · Busan, South Korea

Degree title and expected graduation date not specified.

PROJECT EXPERIENCE

PriviScan — Intelligent Privacy Risk Assessment and Sensitive Information Protection System

University capstone project focused on helping users assess and protect personal information in digital content before sharing.

- Developing a Python-based workflow for image/document upload, OCR analysis, sensitive-information detection, risk reporting, and redaction.
- Working with PaddleOCR and OpenCV to extract text and identify regions of interest in images.
- Designing detection for names, email addresses, international phone numbers, addresses, and varied identification numbers.
- Developing explainable, context-aware risk assessment across healthcare, finance, education, business and employment, government and legal, and consumer-service contexts.
- Planning user-selected automatic and manual options for blurring or redacting detected information.

TECHNICAL SKILLS

Programming / Backend: Python, FastAPI
OCR / Computer Vision: PaddleOCR, OpenCV, [redacted]
Development: REST API prototyping, file upload handling, debugging, virtual environments
Project areas: Sensitive-data detection, privacy-risk assessment, image redaction

ACADEMIC & TEAMWORK

Capstone Design project work with the university group “Code & Confusion,” involving collaborative planning and development of a privacy-protection application.

CAREER INTEREST

Entry-level opportunities in software development, Python/backend development, AI-assisted applications, OCR/computer vision, and privacy or information-security technology.
